

ZC3

3-way sector mixing valves

3-way sector valve bodies for hot water heating installations. These valves can be installed as mixing valves and as deflection valves. Suitable for medium and large systems.

Dimensions (mm)

OPERATION

The hot water which comes from the boiler is mixed with a part of water a bit colder which comes from the return pipeline of the system, the shaped rotor provides the dosing of the two streams in order that the temperature in the delivery pipeline to reach the value required by the control unit.

INSTALLATION

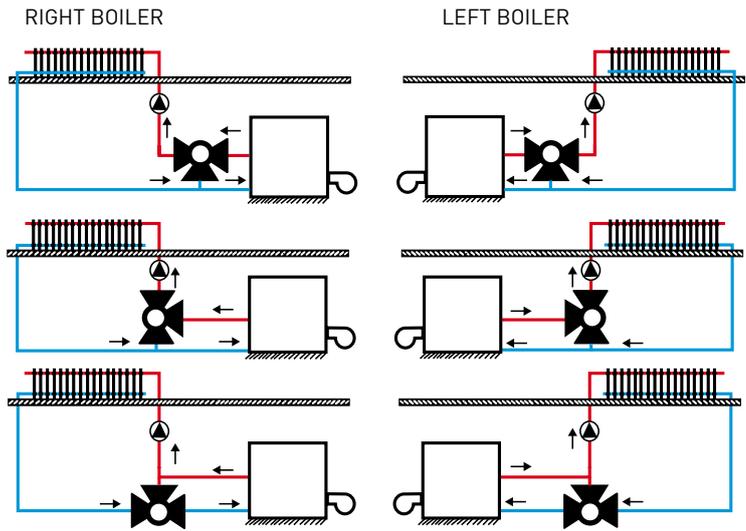

These valves can be installed as mixing valves (constant flow rate, variable temperature), as well as deflection valves (variable flow rate, constant temperature) according to the installation requirements.

Easy hydraulic connection.

Valve motorization is fast and easy executed with:

- 024 type servocontrol and T01D coupling group;
- 034A type servocontrol and T04E coupling group.

It is always possible to disconnect the servocontrol in order to operate the valve manually using T05A kit.

FEATURES

Cast iron valve body.

Bronze rotating sector valve shaped to obtain a very precise regulation.

18/20 stainless steel shaft.

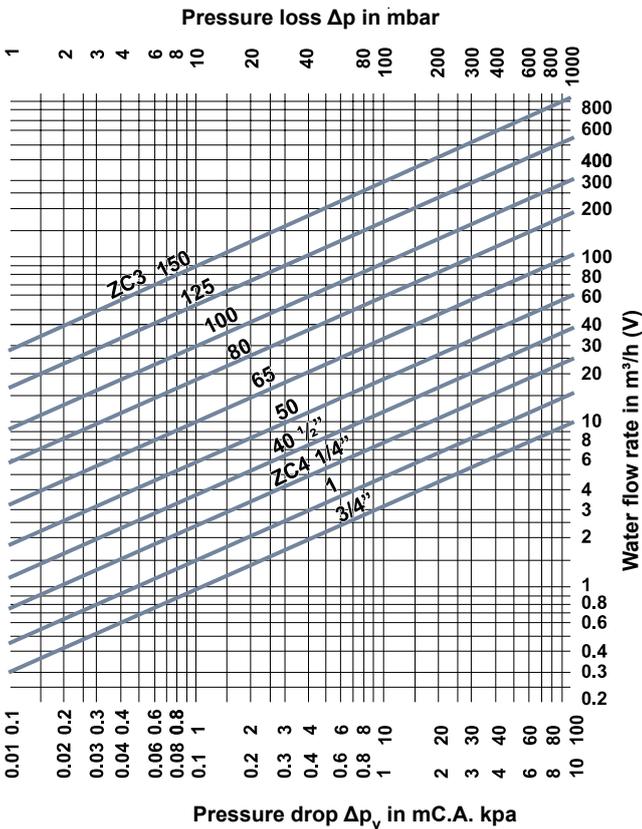

Inner seal with viton O-rings 75 ÷ 280°C.

Lever for manual control.

Operating pressure PN6.

Maximum operating temperature - 120°C.

PARAMETERS DETERMINATION

1 m^3/h = 0,278 kg/s water 20°C
