Basic ejector »SBP-C«, Bleeder valve, Silencer, Nozzle size 1 mm

Basic ejector »SBP-C«, Bleeder valve elec. vacuum switch, Silencer, Nozzle size 1 mm, Compressed air / vacuum connection 6/8 mm . Purely pneumatic vacuum generator that operates on the Venturi principle. Compressed air enters the ejector at A and flows through the nozzle B. This results in a vacuum immediately behind the nozzle outlet, and air is drawn in through the vacuum inlet D. This air and the driving air leave the ejector via the silencer C. Properties:

- Vacuum generator with a single nozzle, available in six power ratings, with a high maximum vacuum value (85%)

- Connection of compressed air and vacuum with push-in coupling
 - Basic housing with connection facility for a vacuum switch
 - Maximum suction capacity with minimum compressed air consumption
 - Minimum size, low weight
 - Various power ratings for optimised air consumption
- Applications:
- For universal use in handling systems with very high dynamic movements
 - Handling all kinds of air-tight components
 - For use in separation systems where space is restricted
 - Construction of ejector blocks for centralised or decentralised individual control of suction pads
